Embed payments into your platform for spend control, immediacy, and simplicity.

Modulr
Expense Management

We know your customers expect increasing sophistication from your platform to solve their business expense problems, and they're voting with their feet. We also know that for your platform to satisfy the sophistication they demand, it requires total control of a complex financial ecosystem. Imagine if you had total visibility of your ecosystem's payment flows. On top of that, what if you had automated rules to control spending? Instant payments to immediately reimburse staff? Or could cut down employer admin and unnecessary delays?

Modulr helps expense management platforms become FinTechs without the payment scheme access, regulatory or technological burden. Embed our payment services through one API in weeks.
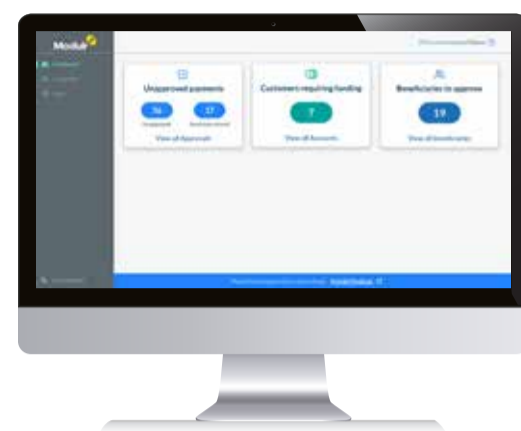

Our Services for expense management

Offer digital payment accounts as a core service and build new features on top such as cards, Open Banking and Confirmation of Payee.

One-stop-shop physical or virtual corporate card issuing with spending limits and full control over card programmes without the hassle of third-party BIN sponsorship.

Reimburse staff instantly 24/7 and notify them and their employer when funds land with webhooks. Leverage Modulr's SLA-backed uptime to the Faster Payments scheme.

Benefits

Embed payment services into expense software for a better user experience.

Greater flexibility to pay-out one-off payments instantly.

Easily integrate new payment services from the wider Modulr platform to expand the stickiness of your proposition.

Automate payment flows and expense disbursements.

Get seamless and automatic reconciliation of payments with full visibility and control over payment flows. Save on operational cost.

Issue pre-paid cards for expenses which can be easily distributed to employees, can be topped up for emergency or last-minute funds or can be taken back if needed.

Results/customer testimonials

"We chose to work with Modulr, the next generation digital alternative to banking, because of their deep experience in payments infrastructure, their foresight to innovation and their commitment to serving businesses across the UK who sorely needed better payment capability."

Chris Downing, Director for Accountants and Bookkeepers, Sage

About Modulr

Modulr is the Payments as a Service API platform for digital businesses. Modulr's new type of payment accounts are built for businesses that need a faster, easier and more reliable way to move money.

Businesses can automate payment flows, embed payments into their platforms and build entirely new payment products and services themselves. All managed in real-time, 24/7 from one API. We've processed over £100bn for the likes of Revolut, Sage, Wagestream and Hyperjar.
